

PMP70-2100MLS | PMP70-2100MLD

OPERATING INSTRUCTIONS

Thank you for the confidence you have shown in us by choosing a REHOBOT product. REHOBOT stands for high quality products and we hope that this product will serve you well for many years.

To avoid problems in operation we recommend that you read these instructions before you use the product.

Technical description (Fig.1)

Max. working pressure:	70 MPa (700 bar, 10000 psi)
Capacity, high pressure:	0.55 l/min (33.6 in ³ /min.)
Capacity, low pressure:	2,35 l/min (143.4 in ³ /min.)
Effective oil volume:	2.1 l (103.7 in ³)
Hydraulic oil grade:	ISO VG 10 or equivalent
Weight:	
PMP70-2100MLS	15,4 kg (34 lbs)
PMP70-2100MLD	16,9 kg (37.3lbs)
Engine:	Petrol, single cylinder, 4-stroke
Power:	1.8 kW (2.5 hp)
Fuel tank:	0.9 l (54.9 in ³)
Fuel:	95 Octane, unleaded
Engine oil:	0.25 l (15.3 in ³), grade SAE 5W40
Spark plug:	NGK CR5HSB
Noise level:	80 dB

MLS-model is suitable for operation with single acting tool.

MLD-model is suitable for operation with double acting tool.

Safety features

The pump is fitted with a built-in safety valve that prevents connected tools from being overloaded. The safety valve is set at the factory to a maximum working pressure of 70 MPa (700 bar, 10000 psi).

System construction

Always check product limitations regarding pressure range. The maximum working pressure of the system must not exceed the maximum working pressure of any product in the system. We recommend the use of pressure gauges with any hydraulic system to ensure that it is operated within its safe working range. Make sure that all hydraulic hoses, connections, tools etc. are connected to the right connection port (pressure or return port).

Installation

Connecting the hydraulic hose

Connect the hydraulic hose using G1/4" coupling or use REHOBOT suitable quick couplings.

Before starting the pump

Before starting the pump, always check the fuel level in the fuel tank and the oil levels in the engine crankcase and the hydraulic oil tank. If the oil level is too low it may cause serious damage to the engine or pump.

Checking the fuel level and refuelling (Fig. 2)

Place the pump on a level surface. Unscrew the fuel cap. Fill up with petrol if necessary (Fig. 2, A). See the Technical description for fuel recommendations.

- Remember that petrol is volatile and highly flammable!
- Always ensure good ventilation when refuelling!
- Never refuel when the engine is running or still hot!
- Take care to avoid spilling petrol when refuelling!
- Wipe any spilled petrol off the engine before starting!

Checking the engine oil level (Fig. 3)

Place the pump on a level surface. Unscrew the oil filler plug (A) and check the oil level using the dipstick attached to the plug (min. (B) and max. (C) levels are marked). Top up with oil if necessary. See the Technical description for recommended oil.

Checking the hydraulic oil level (Fig. 4)

To check the hydraulic oil level, first place the pump on a level surface. Then check the oil level through the level glass on the hydraulic oil tank. The oil is at the correct level when you can see the surface through the level glass. See the Technical description for recommended hydraulic oil.

Operation

Starting the engine

NOTE! Before starting the engine:

- Never place the pump closer than 1 metre to flammable material. Check that there is no flammable material on the engine, such as leaves, grass or the like!
- Never start the pump if the silencer has been removed!
- Never touch the silencer or other engine parts until they have cooled down!
- Avoid inhaling exhaust fumes from the engine, as they are harmful. Always ensure good ventilation!
- Always switch off the pump before leaving it unattended!

1. Open the fuel valve (Fig. 6, A).
2. Set the ignition switch to the "ON" position (6, B).
3. Set the choke control to closed (6, D) to start a cold engine.
4. Start the engine by pulling the starter handle (6, E)
5. Once the engine has started, open the choke control.
6. When the engine has warmed up, adjust to the desired speed using the throttle (6, C)
7. The pump is ready for use.

Pumping, Fig.5

PMP70-2100MLS:

Pumping:

Turn the pump lever valve to setting 2

Neutral setting:

Turn the pump lever valve to setting N

Releasing:

Turn the pump lever valve to setting 1.

PMP70-2100MLD

Pumping:

Turn the pump lever valve to setting 1 or 2 depending on which port is to be pressurized

Neutral setting:

Turn the pump lever valve to setting N.

Stopping the pump

1. Set the throttle to minimum and let the engine idle for a few seconds (Fig. 6, C).
2. Set the ignition switch to "OFF" (6, B) to stop the engine.
3. Turn the control valve to each end setting and then back to the centre position, N (Fig. 5).
4. Disconnect the tool.

Stopping the pump in an emergency

Set the ignition switch to "OFF" (Fig. 6, B) and the pump will stop.

NOTE, remember to depressurise the connected hoses and tools by turning the control valve to each of the end settings and then back to the centre position before disconnecting.

Operating at high altitudes

The standard air to petrol mixture is to rich to allow the engine to work at altitudes above 1500m.

The performance of the pump deteriorates and it will consume more petrol. An excessively rich mixture contaminates the spark plug which will make the engine difficult to start.

The engine must be adjusted in order to improve the performance at altitudes above 1500m. Contact your supplier to have the pump adjusted. The performance of the engine will deteriorate approx. 3,5% for every 300 metres the altitude is increased even if it has been adjusted.

NOTE! When the engine has been adjusted for high altitudes, the air and petrol mixture will be to lean for use on low altitudes (below 1500m).

For more information regarding the use on high altitudes please refer to the engine manufacturers manual.

Accessories

The pumps can be equipped with accessories such as a pressure gauge (e.g. REHOBOT AMT801) and quick couplings such as REHOBOT AQ17 (female) and AQU8 (male).

Service/Maintenance

To ensure reliable operation and long life it is important that maintenance and servicing are carried out according to a fixed schedule.

For safety reasons it is important that the maintenance and servicing should be carried out by experienced personnel (trained to work with high pressure hydraulics). If any doubt contact your nearest authorised service agent or REHOBOT HYDRAULICS AB.

Always use original REHOBOT spare parts.

The following instructions covers normal maintenance and service, for detailed information regarding the servicing of petrol engine please refer to engine manufacturers instructions.

Maintenance and service are divided into daily maintenance (after use), maintenance after 10, 25, 50 and 100 hours in operation, as outlined in Fig. 7.

Service/Maintenance instructions

Checking the engine oil level (Fig. 3)

Place the pump on a level surface. Unscrew the oil filler plug and check the oil level using the dipstick attached to the plug (min. and max. levels are marked). Top up with oil if necessary. See the Technical description for recommended oil.

Checking the hydraulic oil level (Fig. 8)

To check the hydraulic oil level, first place the pump on a level surface. Then check the oil level through the level glass on the hydraulic oil tank (A). The oil is at the correct level when you can see the surface through the level glass. If necessary, top up the oil through the filler plug (B) on the tank. See the Technical description for recommended hydraulic oil.

Hydraulic oil that is drained (or leaks out) from the equipment and components and is replaced during servicing or repairs must be collected and disposed of in accordance with the relevant environmental laws and regulations.

Changing the hydraulic oil (Fig. 8)

Unscrew the oil filler plug (B). Then unscrew the drain plug (C) and drain off the oil. Once the oil has drained, replace and tighten the drain plug. Fill with new oil through the hole for the oil filler plug (B). The oil is at the correct level when you can see the surface through the level glass (A). See the Technical description for recommended hydraulic oil.

Hydraulic oil that is drained (or leaks out) from the equipment and components and is replaced during servicing or repairs must be collected and disposed of in accordance with the relevant environmental laws and regulations.

Changing the engine oil (Fig. 9)

Unscrew the oil filler plug (A). Then unscrew the crankcase drain plug (B) and drain off the oil. Once the oil has drained, replace and tighten the drain plug. Fill with new oil through the hole for the oil filler plug. Use the recommended grade and quantity of oil, see the heading Technical description.

Motor oil that is drained (or leaks out) from the equipment and is replaced during servicing or repairs must be collected and disposed of in accordance with the relevant environmental laws and regulations.

Cleaning the air filter (Fig. 10)

Release the two clips on the air filter cover (A). Remove the cover (B) by folding it downwards, lift the cover off the lower clips (E). Remove the filter cartridge (C) from the cartridge. Wash the filter with detergent and water. When the filter is completely dry, moisten it with engine oil. Squeeze out the surplus oil. Refit the filter.

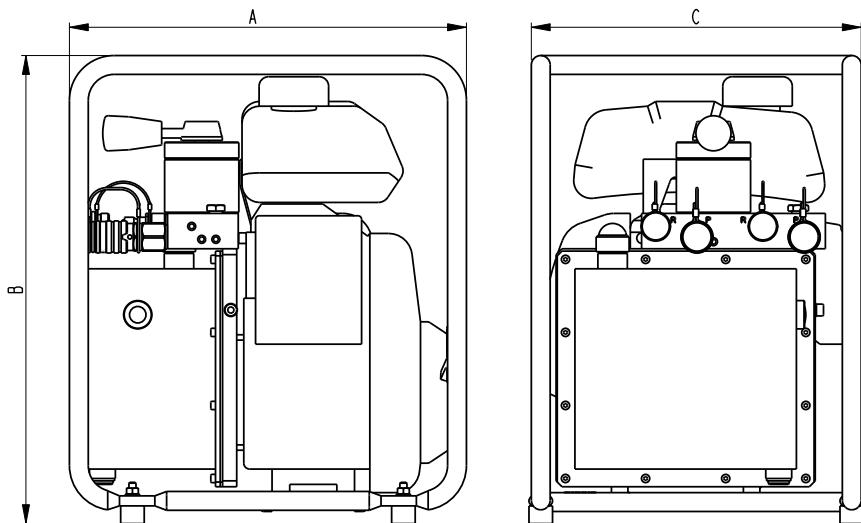

Cleaning the spark plug and adjusting the electrode gap

Unscrew the spark plug from the cylinder. Clean the electrodes with a wire brush or the like. Adjust the gap between the electrodes according to Fig. 13. Screw the spark plug back into the cylinder. See the Technical description for the recommended spark plug.

Storage (long term)

The equipment should be stored in a dry, well ventilated area. Before storage carry out the following activities:

- Clean the pump.
- Empty the fuel tank.
- Drain the carburettor.
- Replace the engine oil.

GARANTI | TAKUU | GUARANTEE | GARANTIE | GARANZIA | GARANTIA | GARANTIA | 质保条款

SE Garanti

För denna produkt lämnar REHOBOT Hydraulics AB full garanti för tillvernings- och materialfel. Produkten har under tillverningsprocessen passerat ett antal kontrollpunkter för att säkerställa funktion och kvalitet. Åtagandet gäller ny produkt och är giltig 12 månader från den dag användaren mottagit produkten. För att garantierättning skall utgå krävs att kvitto på produkten köpts kan uppvisas.

Garantin gäller under förutsättning att produkten används på normalt sätt och enligt anvisningar och instruktioner. Garantin omfattar t.ex. ej:

- skador uppkomna genom normal försilting eller bristfälligt underhåll
- skador uppkomna genom felaktigt handhavande eller överbelastning
- modifieringar eller ombyggnader ej godkända av REHOBOT Hydraulics AB
- skador uppkomna genom användande av reservdelar som ej är REHOBOT originaldelar.

För el- och bensinmotorer som sälts tillsammans med REHOBOT-produkter, baserar sig REHOBOT Hydraulics AB's åtagande på respektive tillverkarens garantivillkor som bifogas varje produkt. Vid garantianspråk kontakta Din återförsäljare för information angående närmaste auktoriserad serviceverkstad för reparation eller ev. byte.

REHOBOT Hydraulics AB påtar sig härutöver inget ansvar.

NO Garanti

För detta produktet gir REHOBOT Hydraulics AB full garanti for produksjons- og materialefel. I løpet av produksjonsprosessen har produktet gjennomgått flere kontrolltester for å sikre funksjonalitet og kvalitet. Garantien gjelder nye produkter, og er gyldig i 12 måneder fra den dagen brukeren mottatt produktet. For at garantierstatning skal gis, må kvittering med kjøpsdatoen kunne fremvises.

Garantien gjelder under forutsetning at produktet er blitt brukt på normal måte, og i henhold til anvisninger og instruksjoner. Garantien omfatter for eksempel ikke:

- skader som har oppstått på grunn av vanlig slitasje eller manglende vedlikehold
- skader som har oppstått ved feil bruk eller overbelastning
- endringer eller ombygningene som ikke er godkjent av REHOBOT Hydraulics AB
- skader som har oppstått på grunn av bruk av andre reservedeler enn REHOBOT originaldeler

För el- och bensinmotorer som selges sammen med REHOBOT-produkter, er REHOBOT Hydraulics AB's forpliktelser baserat på de respektive produsentenes garantivillkor, som er vedlagt hvert produkt. Ved krav i henhold til garantien kontakter du forhandleren, som kan gi opplysninger om nærmeste autoriserte serviceverksted for reparasjon eller eventuelt bytte. REHOBOT Hydraulics AB påtar sig intet ansvar utover dette.

DK Garanti

REHOBOT Hydraulics AB giver fuld garanti for fremstilnings- og materialefel for dette produkt. Produkter har under fremstilningsprocessen passeret et antal kontrollpunkter for at sikre funktion og kvalitet. Garantien dekker kun nye produkter og er gyldig 12 måneder efter, at kunden har modtaget produktet. Garantien gælder kun, hvis kvittering med angivelse af købsdatoen kan opvises.

Garantien er kun gyldig, hvis produktet er brugt på en normal måde og i henhold til anvisninger og instruktioner. Garantien omfatter f.eks. ikke:

- skader opstået ved normal slitage eller mangelfuld vedlikeholdelse
- skader opstået ved forkert håndtering eller overbelastning
- modifiering eller ombygning, som ikke er godkendt af REHOBOT Hydraulics AB
- skader opstået ved brug af reservedele, som ikke er REHOBOT originaldele.

För de el- och benzinmotorer, som selges samman med REHOBOT-produkter, baseras REHOBOT Hydraulics AB's forpliktelser på de pågående producenters garantivillkor, som vedlägges hvert produkt. Ved påberåbelse av garantien skal De kontakta Deres forhandler for at få informasjon om det nærmeste autoriserte serviceverkstedet for reparasjon eller evt. udskifting. REHOBOT Hydraulics AB påtar sig intet yderligere ansvar.

FI Takuu

REHOBOT Hydraulics AB myöntää tälle tuotteelle valmistus- ja materiaalivirheit kattavan täyden takuu. Tuotteen elle valmistusprosessissa alkana suoritettu uselua tarkastuskaiva, joilla on varmistettu sen toiminta ja laatu. Takuu koskee uutta tuotetta ja on voimassa 12 kuukautta sitä päävästä lukiin, jolloin käyttäjä vastaanotti tuotteen. Takuuvaatimusten tueksi on esittettävä kuitti, josta käy ilmi, milloin tuote on ostettu.

Takuu on voimassa sillä edellytyksellä, että tuoteta on käytetty normaalilla tavalla ja annettujen ohjeiden mukaisesti. Takuu ei kata esim.:

- normaalista kulumisesta tai puuteileilta kunnossapidosta
- aiheutuneita vikoja
- virheellisestä käsitteilystä tai ylikuormituksesta aiheutuneita vikoja
- ilman REHOBOT Hydraulics AB:n hyväksyntää suoritettuja muutoksia ja lisäyskiä
- muiden kuin REHOBOT alkuperäisten varaosien käytöstä aiheutuneita vikoja

Yhdessä REHOBOT-tuotteiden kanssa myytyn sähkö- ja bensinliimoottoreiden osalta REHOBOT Hydraulics AB:n sitoumuksiset perustuvat ko. valmistajan takuuohjoihin, jotka toimitetaan kunkin tuotteen mukana. Esitä takuuvaatimukset jälleennäytäessä, joita saat tiedot lähiimmästä valtuutetusta huoltokorjaamoista tuotteen korjaamista tai mahdollista vaihtoa varten. REHOBOT Hydraulics AB ei hyväksy tähän määritteltyjen lisäksi muita velvoitteita.

GB Guarantee

REHOBOT Hydraulics AB provide a full guarantee covering manufacturing and material faults. During its manufacture the product has undergone several control checks to ensure its safety, efficiency and quality. The guarantee covers new products only and is valid for 12 months from the day the customer receives the product. Claims under the guarantee can be made only on production of the original receipt of purchase.

The guarantee is valid only if the product has been used in the normal way and according to the instructions provided.

The guarantee does not cover, e.g.:

- damage caused by normal wear or lack of maintenance
- damage caused by misuse or overloading
- modification or rebuilding not approved by REHOBOT Hydraulics AB
- damage resulting from the use of spare parts which are not REHOBOT original parts.

For electric and petrol engines sold in conjunction with REHOBOT products, REHOBOT Hydraulics AB's commitment is based upon the guarantee terms of the manufacturer concerned, enclosed with each product.

Claims under the guarantee should be made to your retailer who will refer you to the nearest service workshop for repairs or possible replacement. REHOBOT Hydraulics AB accept no responsibility in addition to this.

DE Garantie

Für dieses Produkt gewährt REHOBOT Hydraulics AB volle Garantie für Herstellungs- und Materialfehler. Das Erzeugnis hat zwecks Funktions- und Qualitätssicherung während des Fertigungsverfahrens eine Anzahl Kontrollpunkte passiert. Die Gewährleistung gilt für neue Produkte und hat eine Gültigkeitszeit von 12 Monaten von dem Tage an, an dem der Anwender das Erzeugnis erhalten hat. Damit die Garantie Gültigkeit erlangt, muss eine Quittung vorgewiesen werden, aus der das Kaufdatum hervorgeht.

Die Garantie gilt unter der Voraussetzung, dass das Erzeugnis auf normale Art und nach den Anweisungen und Instruktionen verwendet wurde.

Die Garantie umfasst z. B. keine - durch normalen Verschleiß oder mangelhafte Instandhaltung entstandenen Schäden - durch fehlerhafte Handhabung oder Überbelastung entstandenen Schäden - Änderungen oder Umbauten, die nicht von REHOBOT Hydraulics AB gegeben sind - Schäden, die durch die Verwendung von Ersatzteilen entstanden sind, die keine REHOBOT-Originaleile sind.

Für Elektro- und Benzinmotoren, die gemeinsam mit REHOBOT-Produkten verkauft werden, gelten die Garantiebedingungen des jeweiligen Herstellers, die jedem Produkt beigelegen.

Bei Garantieansprüchen wenden Sie sich bitte an Ihren Wiederkäufer wegen Auskünften über die nächste Vertragswerkstatt für Reparaturen oder eventuellen Austausch. REHOBOT Hydraulics AB übernimmt hierüber hinaus keine Verantwortung.
